

OpenClaimFlow

The complete demo — every role, every capability

Part A: 45 screenshots from the running product, in user order

Part B: 11 platform capabilities (evidence → locale/a11y) + system map

Claimant files and tracks → adjuster assesses and decides → supervisor oversees

- Claimant — file + track
- Adjuster — assess + decide
- Supervisor — oversee + administer

1 · Public home page

The front door — no login needed to start.

- File a claim and Track a claim are the two actions a visitor sees.
- Everything behind this page requires sign-in through Keycloak SSO.

2 · File a claim — step 1: who is covered

The claimant identifies their policy.

We could not match that policy number with the holder details provided.

2 What happened

A description of the incident helps route your claim to the right adjuster. Filing for POL-30007.

Date of loss

12/07/2023

Location

London

Evidence photos

Choose Files

No file chosen

Photos speed up your claim; you can add up to 5.

What happened?

Shot demo: retired-policy probe that must not file.

Remarks (optional)

Anything else the adjuster should know...

- The error names no policy internals — a stranger probing numbers learns nothing.
- Retired policies stay readable for history, but the FNOL door stays shut.

OpenClaimFlow complete demo • page 4 of 59

4 · File a claim — step 2: what happened + covers

The loss itself, plus one amount per opted cover.

 **Meridian Claims**
Loss management

[My policies](#) [My claims](#) [File a claim](#) [shotclaim178887288146](#) [Sign out](#)

☒ **DAYCARE** — Daycare Procedures

Claimed amount (₹)

Sub-limit ₹100000

☒ **OPD** — Out-patient (OPD)

Claimed amount (₹)

Sub-limit ₹30000
Above the ₹30000 sub-limit — still fileable, flagged for review

☐ **MATERNITY** — Maternity

Claimed amount (₹)

Sub-limit ₹75000

Date of loss

Location

Evidence photos
 No file chosen
Photos speed up your claim; you can add up to 5.

What happened?

Remarks (optional)

- Health-family policies offer a cover picker: tick Hospitalization, Daycare... and enter each claimed amount.
- Sub-limits never block filing — the OPD figure above its 30k sub-limit files fine and is flagged for the adjuster instead.

5 · Instant claim number

Proof the claim exists, the second it is filed.

 **Meridian Claims**
Loss management

[My policies](#) [My claims](#) [File a claim](#) [shotclaim1788887288146](#) [Sign out](#)

Report a loss

Tell us what happened and we'll issue a claim number straight away. You'll be able to track the claim from the moment it is filed.

 **Claim received**

Your claim number

CLM-000211

Covers filed

- **HOSPITALIZATION** — In-patient Hospitalization — ₹300000.00
- **DAYCARE** — Daycare Procedures — ₹40000.00
- **OPD** — Out-patient (OPD) — ₹40000.00Above sub-limit — flagged for review

Total claimed: **₹380000.00**

What happens next

- 1 FNOL received — your claim is being routed to an adjuster
- 2 Under review — an adjuster has been assigned to your claim

A confirmation email will be sent to the policyholder address.

[Track this claim](#) [Back to home](#)

- A CLM- reference number is issued immediately, with the filed covers echoed back.
- Filing also queues the confirmation notification and routes the claim to the least-loaded qualified adjuster.

6 · Guard rail — duplicate filings return the original number

Same policy + loss date + cover set within 24h is one claim, not two.

Claim	Status	Level	Policy	Loss date	Age	SLA	Location	Description	Owner
CLM-000201	UNDER_REVIEW	L1	POL-DEMO-02	05 Sep 2026	3 days	Due soon	Leeds	Storm tore ridge tiles; rain ingress in two ro...	Priya Sharma

- Search narrows as you type across claim, policy and loss text.
- Oldest-first / newest-first sort stacks the most urgent filing on top.

19 · Claim work surface — facts

Everything the adjuster needs to assess the claim.

- Policy, claimant, loss details, the Review → Verification → Decision stepper, and the triage panel.
- Opening a claim assigned to someone else shows 404, not a permissions lecture.

20 · Reserve, notes, evidence

The adjuster's working tools — all internal, all audited.

The screenshot displays the Meridian Claims Loss management interface. The header shows the company logo and name, a search bar, and a user profile with a 'Sign out' button. The main content area is divided into several sections:

- Claim Details:** A table with fields for Date of loss (05 Sep 2026), Location (Leeds), and Description (Storm tore ridge tiles; rain ingress in two rooms).
- Reserve:** A section for managing the reserve. It includes a description: 'An internal estimate of what this claim may cost — never shown to the claimant.' The current reserve is £1800.00. There is a field for the new reserve (currently 1800) and a 'Save reserve' button.
- Internal notes:** A section for adding internal notes. It shows 'No notes yet.' and a text area for adding a note (currently containing 'Observations, follow-ups, coverage checks...'). There is an 'Add note' button.
- Policy & coverage:** A section for policy and coverage information. It displays a JSON object:

```
{  "type": "home",  "sum_insured": 620000}
```
- Photos:** A section for attaching photos. It shows 'No photos attached.'
- Approval/Action:** A section on the right with a description: 'Approving requires an indemnity amount within your authority; a rationale is recorded for both outcomes.' It includes a field for the indemnity amount (currently 0.00), a 'Rationale' text area (containing 'Required for approval and denial'), and 'Approve' and 'Deny' buttons.

- The reserve is the expected-cost estimate; internal notes carry the reasoning; photos and the coverage JSON sit beside them.
- None of this crosses the claimant wall — the tracker never mentions a reserve.

21 · Staged flow, step 1 — Review triage (live)

A live multi-cover claim at Review: validity first, money later.

New reserve (₹)

0.00

Save reserve

Decision

₹0.00 proposed against your ₹100000.00 limit

Cover	Claimed	Assessed
HOSPITALIZATION	₹80000.00	75000
DAYCARE	₹20000.00	000

Assessed ₹0.00 · Approved

Assessment rationale

Shot demo: assessed within sub-limits.

- Assessed must stay within claimed, within the sub-limit, and within the remaining sum insured — the server enforces all three.
- The totals line does the visible math: assessed total against the authority limit, before any decision exists.

26 · Cover decision grid — split within authority (live)

Approve, reject, or split — per cover, with reasons on every line.

Verification opened.

Verification completed.

Verification completed.

Assessment recorded — claim moved to decision.

- Hospital approved at 70k, daycare rejected with remarks — inside the L1 100k limit, so this closes PARTIALLY_APPROVED.
- Above the limit the same screen saves proposals instead of closing — page 31 shows that stop sign.

27 · Closed — split, payment queued

The live claim decided and the money moving on the approved cover.

Attachment ids / refs

Notes

Required to complete

- The history shows type, outcome, notes and evidence refs — the working record, not a summary.
- This is the exact state the live run passed through on page 22; here it is inspectable at leisure.

OpenClaimFlow complete demo · page 30 of 59

30 · The authority gate (seeded)

The visible stop sign: proposals above your limit stay on the claim, open.

- The gate banner reads the maths aloud — 900k proposed against a 400k personal limit — nothing auto-moves.
- Refer upwards is explicit: a named senior, or auto-pick a qualified one; rejection stays ungated.

31 · Mixed outcome — partially approved (seeded)

One cover pays, another is rejected with reasons; the claim closes split.

- Per-cover outcomes with deductibles and net payables, closed as PARTIALLY_APPROVED with a single payment.
- The claimant sees exactly this shape on their tracker (page 13) — minus every internal figure.

32 · Legacy single-figure decision

The fast path for simple no-cover claims: one amount, one rationale.

Decision

Approving requires an indemnity amount within your authority; a rationale is recorded for both outcomes.

Indemnity amount (£)

0.00

Rationale

Required for approval and denial

Approve

Deny

- Within-limit approvals close the claim and queue payment + notification; above-limit is blocked and escalates.
- Untouched by the staged rebuild — byte-identical behaviour, including auto-escalation.

OpenClaimFlow complete demo · page 33 of 59

33 · Guard rail — 404, not 403

A claim number that is not yours reads as not-found.

- No existence signal, no permission lecture — the wall holds adjuster-to-adjuster and claimant-to-claimant alike.
- Supervisors alone see across the book, and only from their own surfaces.

34 · Supervisor overview

The whole book of business at a glance.

- Aggregates: open claims, exposures, approvals, rejections, aging — reconciling with the queues beneath.
- The seeded six-day-old escalation is what makes the aging pressure read honestly.

35 · Notification outbox

Proof that claimants were told what happened.

Advisory only

Close

You

Does the waiting period apply here?

Assistant

Yes — a maternity waiting period applies.

- Loss/admission date is **2024-05-05**, i.e. on/after **1 April 2024**, so MATERNITY 7.1 sets the waiting period at **180 days of continuous cover from first inception** (not 270 days).

- Under clause 2.3, the maternity waiting clock runs only on continuous cover without a break exceeding 30 days; a break resets it.

- The 36-month pre-existing waiting period (clause 3.1) would apply if the maternity expense is for a pre-existing disease as defined; the facts do not state that.

I cannot confirm whether the 180-day waiting period is satisfied because the claim facts do not give the policy's first inception date or continuous-cover duration. That needs to be verified.

Live

Advisory only — the adjuster decides.

Ask about coverage, clauses, or next steps...

Send

- Asked whether the waiting period applies — the answer cites the maternity wording with a Live/Fallback serving path.
- Chat is conversational and always available; the per-cover advisory artifact stays gated until Decision.

44 · Policy clauses — the wording behind the covers

Every clause in scope for this claim's product and covers, readable without leaving the workspace.

Send

- Cover summary, covers with remaining limits, rating parameters and covered/excluded wording — the same page claimants see.
- File-a-claim is hidden for staff: the workspace reads the policy, it never files from it.

Part B — platform

Under the screens: the eleven capabilities that make it production-grade.

- Each page: what the capability is, how to demo it live, and the suite that proves it.
- No extra screenshots needed — these are best shown live in the running app.

S1 · Evidence integrity — PDF uploads with tamper-evident integrity

Photos and PDFs are validated, hashed, and measured on the way in.

What it is

- FNOL accepts PDFs as well as photos; magic-byte checks reject renamed executables.
- Every attachment stores a SHA-256 hash plus size (migration V18) — corruption or tampering is detectable.
- Oversized or wrong-type files are refused with a plain-words error before anything saves.

Try it live

Try: File a claim → step 2 → attach a PDF alongside photos
API: POST /api/claims (multipart) → attachment sha256 + size_bytes

Proof: Proved by: PhotoValidationTest (12) + AttachmentIntegrityIntegrationTest (5) — backend 241/241 at S1.

S2 · Object storage seam — Filesystem today, S3 tomorrow — zero code change

Evidence bytes sit behind a storage interface with two backends.

What it is

- Default is the local filesystem; setting CLAIMS_S3_* env vars switches to any S3-compatible store.
- Ships with MinIO for local dev (:9001 console) and a backfill runner that copies existing files over.
- No new dependencies — signing is hand-rolled SigV4 over the JDK HTTP client.

Try it live

Try: `docker compose up (MinIO)` → set `CLAIMS_S3_ENDPOINT` → restart backend
Docs: `docs/operations.md` (S3 page)

Proof: Proved by: `S3StorageIntegrationTest` (5, stubbed HTTP) — backend 246/246, `pom.xml` diff empty.

S3 · Required-documents checklist — No more NEED_INFO ping-pong

Each product declares the documents a claim needs; the claim tracks them.

What it is

- Health policies demand the itemised bill and discharge summary; auto demands the estimate and RC copy.
- The adjuster links an uploaded file to a checklist item — or waives it with a written rationale.
- The claimant's tracker shows the same list, so both sides see what is missing. (Migration V19.)

Try it live

```
Try: claim detail → checklist (testids claim-reqdocs/count/item)
API: GET/POST /api/claims/{n}/required-documents.../{checkId}/link|waive
```

Proof: Proved by: RequiredDocumentsIntegrationTest (14) + e2e/need-info-docs.spec.ts — backend 260/260.

S4 · Document versioning — Supersede, don't delete

A corrected bill replaces the old one without rewriting history.

What it is

- Each attachment carries a document type and an optional replaces-link (migration V20).
- The timeline reads '(supersedes: <old name>)' — the audit trail shows the correction, not a cover-up.
- Every version stays downloadable; the newest is simply the current truth.

Try it live

Try: claim detail → attachment → Replace (testids detail-attach-doctype/replaces)
Timeline pin: detail-timeline-supersedes

Proof: Proved by: AttachmentSupersedeIntegrationTest (6) — backend 266/266.

S5 · Concurrency safety — Two editors, no silent overwrite

Optimistic locking means the second saver is told, never silently merged.

What it is

- Every claim carries a version number (migration V21); each write sends the version it read.
- A stale write gets HTTP 409 CONFLICT and a banner naming who saved first and what changed.
- The adjuster reloads, re-applies their edit, and saves again — nothing is lost.

Try it live

Try: open one claim in two browsers → save in both → conflict banner
Pin: detail-conflict-banner · API: 409 {error: CONFLICT}

Proof: Proved by: ClaimConcurrencyIntegrationTest (3) + e2e/conflict.spec.ts — backend 269/269.

S6 · Claim reopen — Supervisor-only second chance, fully audited

A closed claim can come back — with a reason, a new payment sequence, and a paper trail.

What it is

- Only supervisors see the Reopen action; it demands a written rationale.
- Payments are sequenced per claim (UNIQUE(claim_id, seq), migration V22) — a reopened payout is payment #2, never a duplicate #1.
- The timeline notes 'Reopened — <rationale>' and the claimant is notified like any other decision.

Try it live

Try: closed claim → Reopen (testids detail-reopen-toggle/rationale/confirm)
API: POST /api/claims/{n}/reopen (SUPERVISOR)

Proof: Proved by: reopen E2E (live close → reopen → timeline asserts) — backend 275/275.

S7 · Staff management — Offboard in one click — queues never strand

Activating or deactivating an adjuster is a supervisor self-service action.

What it is

- The staff page lists every adjuster with level, load, and an active toggle.
- Deactivated staff vanish from auto-assignment instantly; their open claims can be reassigned mid-flight.
- No code change, no restart, no orphaned queue. (No migration — active flag predates the slice.)

Try it live

```
Try: /admin/staff → toggle (testids staff-page/row-{id}/toggle/confirm)
API: PUT /api/staff/{id}/active
```

Proof: Proved by: StaffAdminIntegrationTest (4) + e2e/staff.spec.ts — backend 279/279.

S8 · Regulator-ready decisions — Structured denial codes + one-click CSV export

Every rejection carries a machine-readable reason; the whole audit trail exports.

What it is

- Seven denial codes (NOT_COVERED, EXCLUDED_PER_CLAUSE, ABOVE_SUB_LIMIT_EXHAUSTED, INSUFFICIENT_EVIDENCE, DUPLICATE_PRE_EXISTING, FRAUD_SUSPECTED_REFERRAL, OTHER).
- Rejection remarks stay human (≥ 20 chars) — the claimant sees remarks, never the code.
- Supervisors export the audit log and the decision register as CSV straight from the overview. (Migration V23.)

Try it live

Try: cover decision → reason picker (detail-deny-reason-`{code}`)
API: GET `/api/audit/export` + `/api/decisions/export` (text/csv)

Proof: Proved by: StructuredDecisionIntegrationTest (5) + e2e/structured-decision.spec.ts — 284/284.

S9 · Privacy (GDPR) — Self-export, anonymize, retention report

A designed answer to the first EU pilot's questionnaire, before it is asked.

What it is

- Any claimant can download every byte held about them (My claims → Export).
- Supervisors anonymize a data subject on request (name, email, phone, documents scrubbed; claim facts kept).
- The retention report lists closed claims by age bucket against the 7-year policy. (Migration V24.)

Try it live

```
Try: /admin/privacy (testids admin-privacy-anonymize/confirm/report)
API: GET /api/privacy/me/export · POST /api/admin/privacy/anonymize
```

Proof: Proved by: PrivacyIntegrationTest (5×3) + e2e/privacy.spec.ts — backend 289/289.

S10 · Notifications center — Bell, preferences, and an outbox that never loses mail

Claimants are told what happened — in-app, by email, or by SMS.

What it is

- A bell with an unread count sits in the nav; the notification center lists every event with read state.
- Each user picks email / in-app / SMS per event type (plus phone number) — preferences are honoured server-side.
- Every notification also lands in the transactional outbox, so a mail-server hiccup retries instead of losing. (Migration V25.)

Try it live

Try: bell (nav-notifications/count) → /notifications (notif-page/item/read)
Prefs: notif-pref-email/inapp/sms/phone/save

Proof: Proved by: NotificationIntegrationTest (4) + e2e/notifications.spec.ts — backend 293/293.

S11 · Locale & accessibility — Second-customer ready: INR, en-GB, keyboard-first

Money, dates, and day-boundaries follow the tenant — and the app works without a mouse.

What it is

- All money renders as ₹1,500.00 via shared Intl formatters; dates are en-GB; SLA/aging cut at Europe/London midnights.
- Full keyboard run passes (38/38 controls): focus trap in dialogs, roles and labels for screen readers.
- No migration — pure frontend + scheduler/zone config (claims.locale/timezone.default).

Try it live

```
Try: keyboard-only FNOL → queue → decision; switch tenant timezone in .env
Pin: queue.spec asserts the exact string ₹1,500.00
```

Proof: Proved by: aging TZ + day-count tests — backend 295/295, frontend build green.

Appendix · system map

Stack

- Angular SPA (frontend/) → Spring Boot 3 / Java 21 (backend/) → PostgreSQL 16 + Flyway (V1-V25).
- Keycloak OIDC (:8090, realm claims) · Mailpit SMTP :1025 / UI :8025 · MinIO :9001 (dev S3).
- Ports: frontend :4200 · backend :8081 · backend+E2E hermetic pair :8082/:4200, DB claims_e2e.

Demo accounts (dev defaults)

- Claimant ada.lovelace / claims-Pass-123 — POL-10001 HLTH-PLUS, ₹10,00,000 SI.
- Adjusters adjuster.one/.two (L1, ₹1,00,000) · adjuster.three (L2, ₹4,00,000) / adjuster-Pass-123.
- Supervisor supervisor / supervisor-Pass-123 — cross-book views, reassign, reopen, exports.

Authority ladder

- L1 ₹1,00,000 < L2 ₹4,00,000 < L3 < supervisor — per product, editable at /admin/authority.
- Inside limit closes + pays; above limit saves a proposal and refers upward.

Key endpoints

- POST /api/claims (multipart FNOL) · GET /api/claims/mine · GET /api/claims/{n}/full
- POST .../review|verifications|assessment|send-back|cover-decision|refer|reopen|decision
- GET /api/queue · /api/dashboard · /api/escalations · /api/outbox · /api/notifications/mine
- GET /api/audit/export · /api/decisions/export · /api/privacy/me/export · PUT /api/staff/{id}/active

Proof totals

- Backend 295/295 green · frontend build green · hermetic Playwright E2E green (fnol, covers, queue, staged, conflict, reopen, staff, structured-decision, privacy, notifications, need-info-docs).
